

# How Physics Became a Religion

THE  
BOOK  
Believe or  
we will  
KILL YOU!

by  
Robert  
Johan  
Richter

# How Physics Became a Religion.

by

Robert S. Richter

Written and drawn to be published by the  
Prisons Foundation, PO Box 58043, Washington  
DC 20037 as a comic book.

This is an original work and contains  
nobody else's copyrighted material.

*RS Richter*

March 8, 2015

Dannemora NY

## Description:

This comic book is the most comical physics  
book ever. The world's complete failure to  
think is mercilessly detailed, complete with  
the poorest quality illustrations. Warning:  
It gets REALLY crazy.

Many thousands of years ago, our distant ancestors started to think about things.

OOH! Fire!  
What is it?

They didn't do it very well.

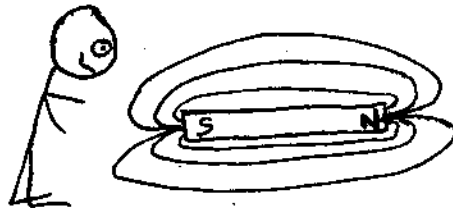

OOH! It's a magnetic field!

We still don't!

Einstein's space-time continuum is distorted by mass...

The Schwarzschild radius is the distance at which the distortion of spacetime becomes ~~more~~

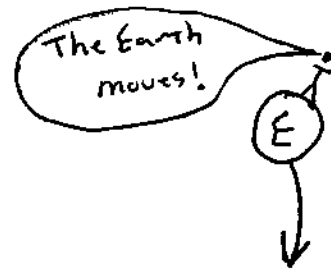

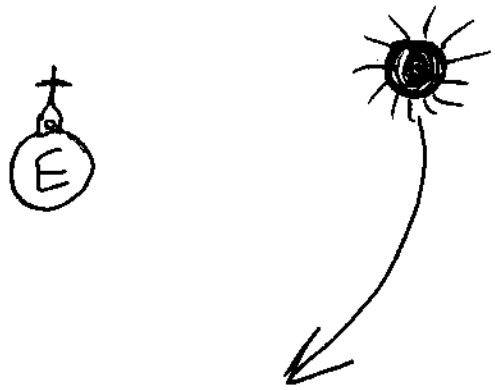

Big Bang

Black hole

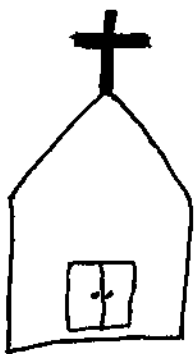

Which one is it? They can't both be true!

People saw the Sun going around the Earth.

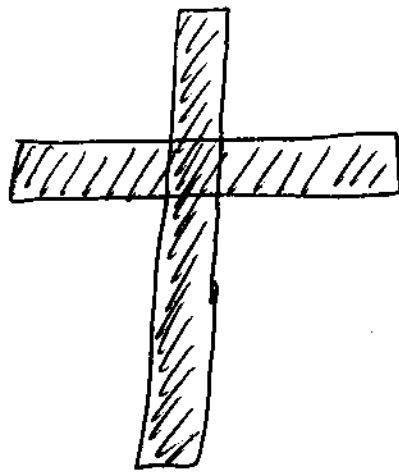

When Galileo dared to say otherwise...

He faced a terrible fate,  
The Church threatened to burn him alive!

Earth:  
Center  
of  
Universe.

Church:  
Center  
of  
Earth.

The Catholic Church claimed to be the "center" of the Earth. If the Earth wasn't the center of the Universe, what was the Church? Galileo had to be STOPPED!

Earth:  
Just another  
planet.

Church:  
Just another  
religion.

Eventually, the truth won out. Pretty much everybody knows that the Earth is just another planet.

Science won, right?

# WRONG!

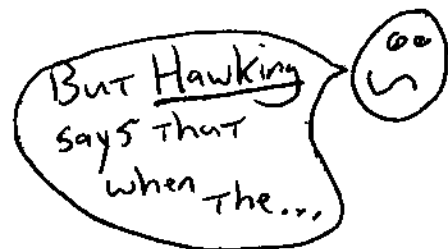

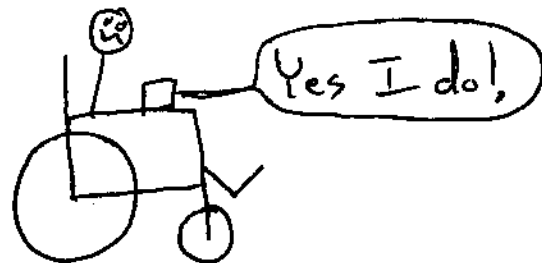

The fundamental science is PHYSICS. What people call PHYSICS is not a science at all! IT is a RELIGION.

Science is based on facts and logic.

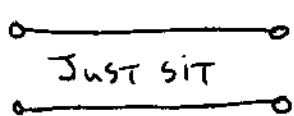

Religion is based on appeals to authority.

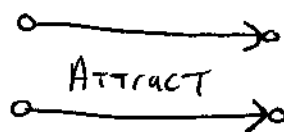

IF A and B, then C.

I studied advanced physics for 30 years. Well, I thought it was advanced. Actually, it was all wrong!

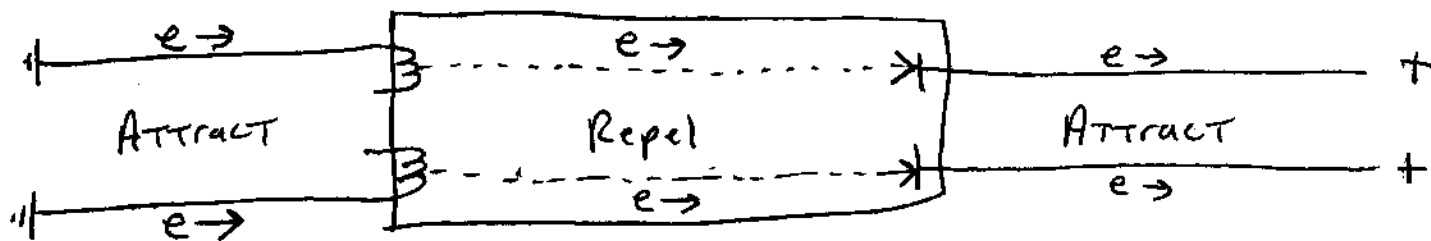

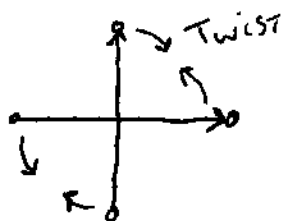

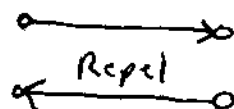

In the 1800's, Scientists

discovered that two

wires attracted each other when they carried electricity in the same direction. The obvious conclusion: The electricity caused the attraction. This was **WRONG!**

In 2010, I discovered that there is no such thing as a magnetic field!

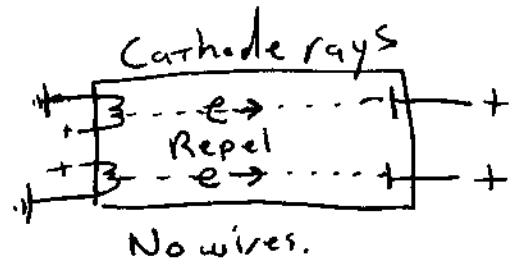

I was **REALLY MAD!** I had wasted 30 years of my life studying **NONSENSE!**

ME, **REALLY MAD!**

Electric currents only attract each other when they are in wires. I knew this all along, EVERY physicist does.

James Clerk Maxwell didn't have cathode ray tubes. He died in 1879.

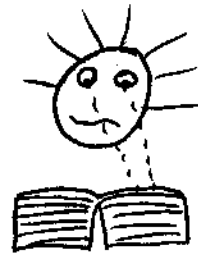

The electron wasn't discovered until 1897.  
The proton wasn't discovered until 1919.

He didn't know what he was looking at!

Maxwell, looking without knowing.

I knew, but I didn't THINK!

Me, reading without THINKING!

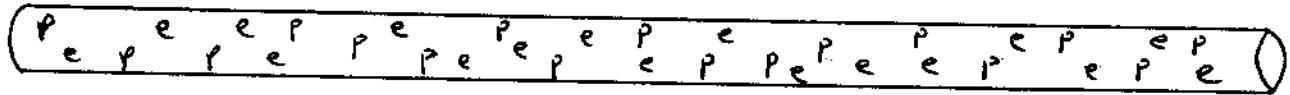

My brain had been **POISONED** by Magnetic Thinking!

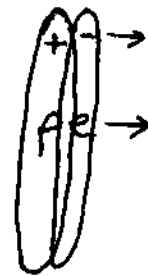

My poisoned brain exposed.

Once I started THINKING, I realised that a "magnetic field" isn't A thing, it is an overlap of two things. Maxwell didn't know about either of them.

Wires contain protons and electrons. Their positive and negative fields cancel out, BUT! When electricity flows, the electrons move, while the protons don't.

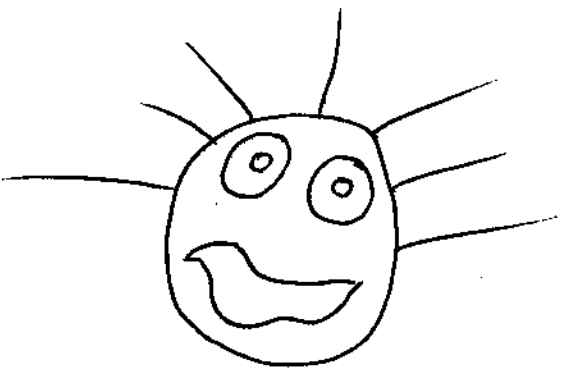

MAXWELL was WRONG!

He thought that a moving electric field created a magnetic field. There are two electric fields, NO magnetic field!

I WAS STUNNED!

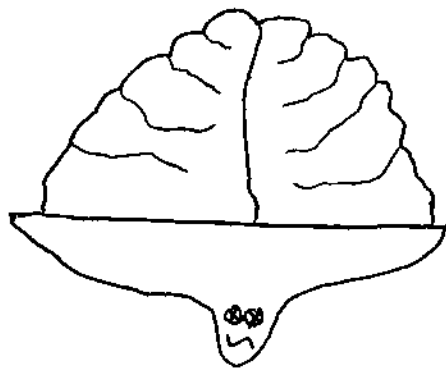

If electromagnetism is wrong, then EVERYTHING IS WRONG!

Me, Stunned.

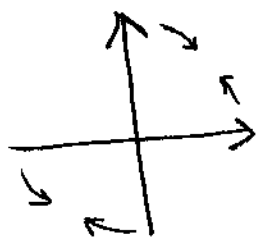

Suddenly, my brain expanded to GIANT size. In no time at all, I solved all of the big problems in physics!

NOW POISON-FREE!

GIANT BRAIN EXPOSED!

Once I stopped believing in magnetic fields,

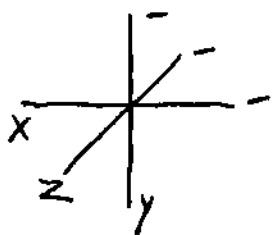

and thought about crossed

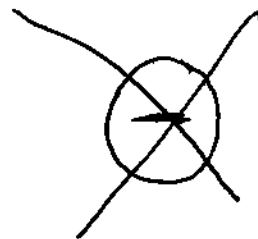

wires, I discovered that electric charge has three separate dimensions.

x y z

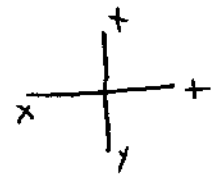

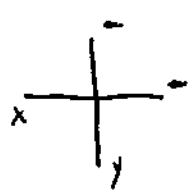

---

-3/3

An electron isn't a negative ball, it's like a toy jack, three negative charges at right angles.

This means that quarks are

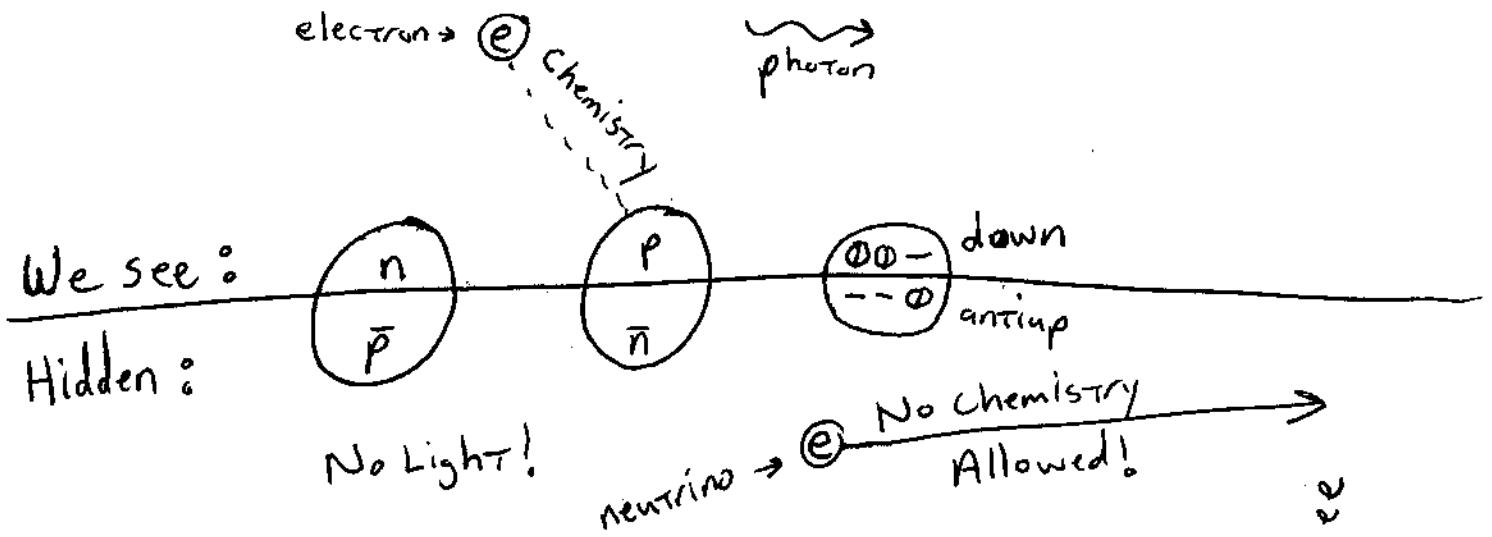

positive or negative in only one or two dimensions, like X's or I's.

XYZ  
⊖⊖-  
Down  
quark

XYZ  
++⊖  
Up  
quark

Everything in particle  
physics made perfect sense!  
I went on to discover  
a whole Universe!

Our familiar xyz Universe.

The hidden Jussiverse!  
YOU-see-verse.  
Jussi Huotari

YOU-see

WHO-oh-Tar-ee

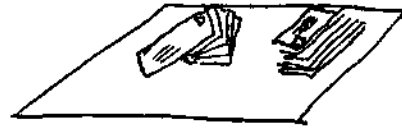

I discovered it, so I named it after Jussi Huotari,  
a Finnish pilot. Why not?

YOU-see-verse, NOT Juicyverse.  
Poetic! Corny!

I started writing LOTS of letters, more than I had ever written before.

Hundreds of letters!

What came next?

## RETALIATION!

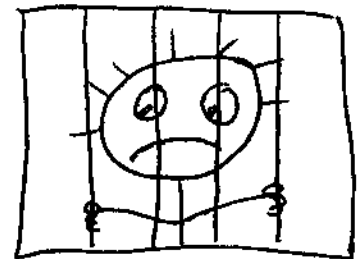

You see, I'm in PRISON.

In 1993, the police said that I killed my girlfriend. All of

the Evidence said that I

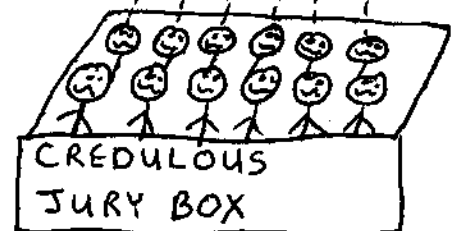

didn't do it. Guess what the jury believed?

How did the D.A. explain it?

Me, in PRISON

There's no way the POLICE would ever lie!

These idiots will believe ANYTHING!

D.A. Actual Closing Statement!

Ladies and gentlemen of the jury, the fact that there is no evidence connecting\* the defendant to the victim's death proves that he is guilty of this murder.

\* Maybe he said "to connect"?

So what's this retaliation? Why would prison officials care about physics?

I don't care.

They don't care about physics, but they don't like attention. A CO

Correction Officer,  
NOT Caring.

even warned me that I'd better

stop writing to so many magazines.

I didn't listen, so they put me

**IN THE BOX!**

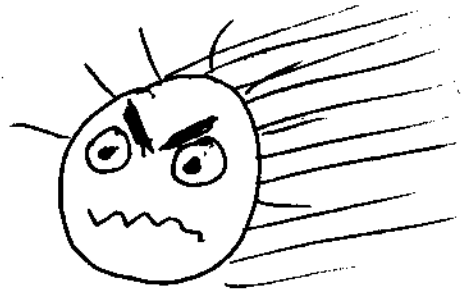

Me, in  
THE BOX.

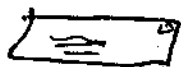

Did I stop? No! I

Kept on writing,

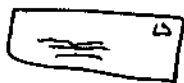

and writing,

Me, NOT  
STOPPING!

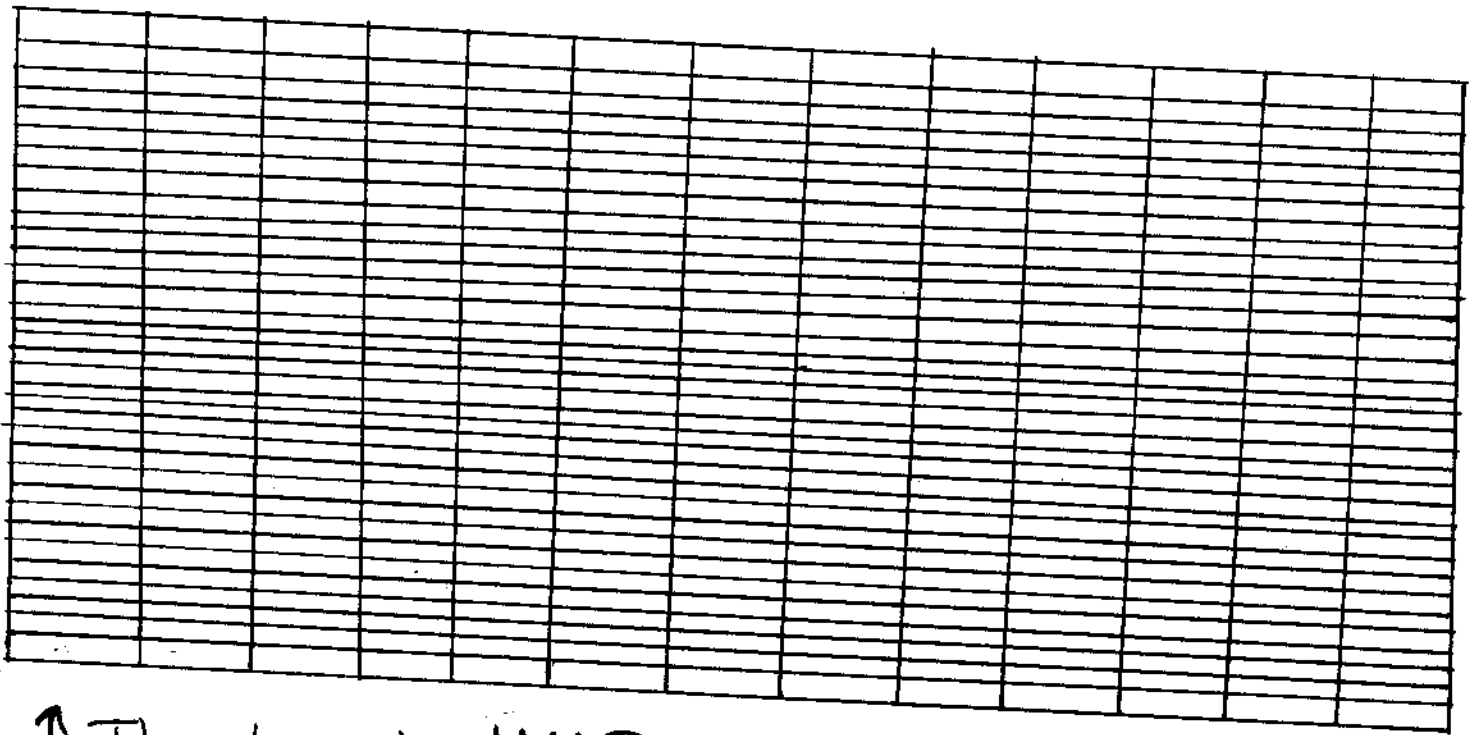

and

writing...

I wrote more than 5000 letters.

↑ That's only 442.

Nobody paid any attention.

Everybody JUST ignored me.

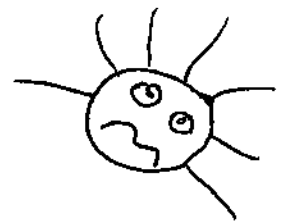

People ignoring me.

My mother,  
being CRAZY!

Oh, my darling son, not a day goes by I don't think about you!  
What jail are you in?

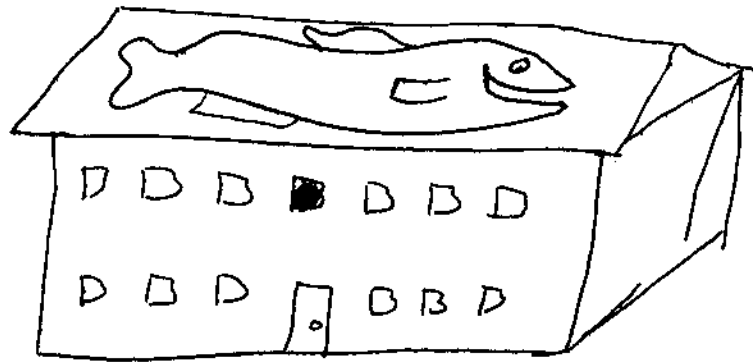

Me,  
wondering  
why  
I even  
bothered.

I even tried calling my crazy mother. I'd been in the same prison for FIVE YEARS!

Me, GOING  
CRAZY!

Salmon River Central School

I was  
GOING Crazy! It was time to try something  
else. I wrote to Angela Robert, Director  
of Instruction at the Salmon River Central  
School in Fort Covington. I told  
her that the "physics" being  
taught in her school was  
WRONG, included clear proof,  
then told her I was going to  
SUE HER if it didn't stop!

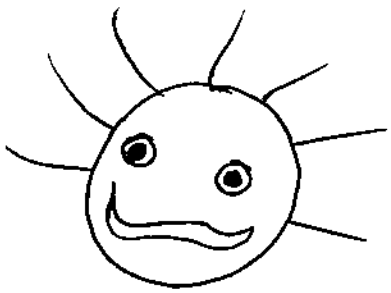

Robert,  
being  
Evil.

BIG mistake! She didn't do what  
I expected! Did she call a lawyer?  
ASK for advice? Act Reasonable?

No! She called the State Police!

Who calls the police when they are getting SUEd?

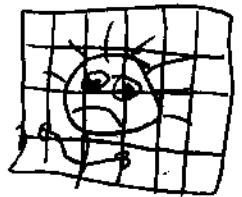

Me, not being PARANOID ENOUGH!

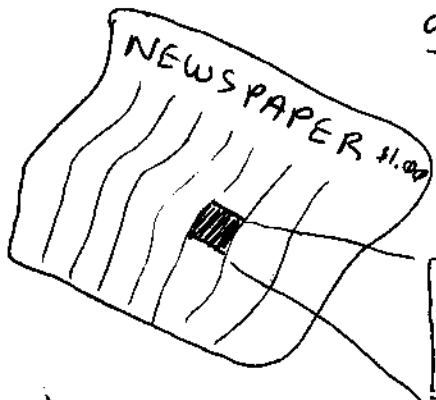

You see, I thought that she would show the paper to a physics teacher. He would immediately see what I was talking about. Why didn't I just write <sup>to</sup> a physics teacher? I'm in PRISON, remember? I can't get people's addresses.

Retaliating Cop.

Me, STILL IN PRISON.

I found a newspaper with the **DEVIL'S** name in it.

The another newspaper.

Then I found another with Robert's name and business address. Random chance.

Why did she call the police?

I FOUND OUT!

On December 3, 2014, I was at work. I was snatched up and thrown in an OMH strip cell. I was kept there for five days. I didn't get a single meal. Nobody would tell me what I did.

Me, in the strip cell.

Me, in the BOX again.

Then they put me in the box again. I was charged with threatening to sue a government official!

Me, five days later.

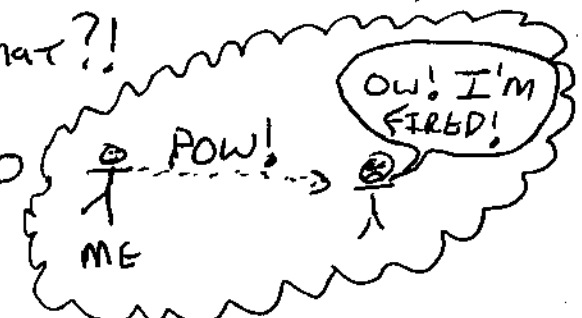

Angela Robert told the authorities that I was going to GET HER FIRED! What?!

How could I possibly do that? I can't just get people fired!

I WISH I had that kind of POWER!

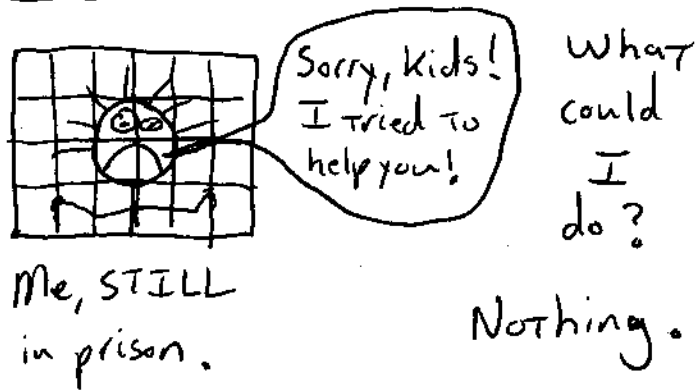

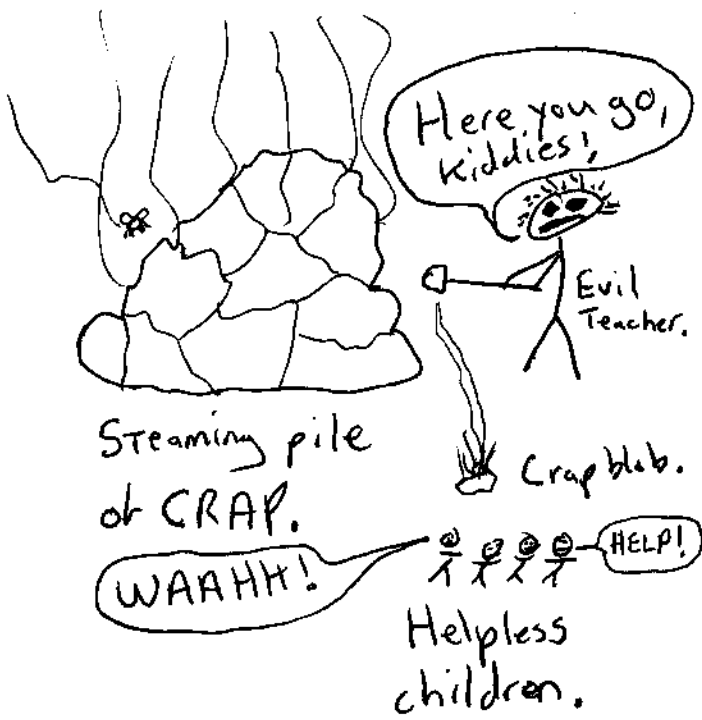

Me, dreaming about having super-firing power!

What was she doing that made her so damn SCARED?

All over Amerikkka, all around the world,

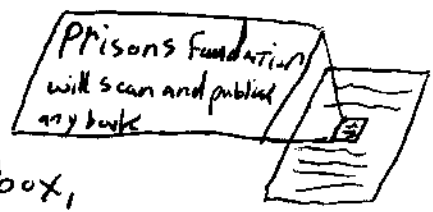

millions of helpless children were being taught RELIGION in schools. In Amerikkka, this is supposed to be Totally ILLLEGAL!

What is the worst form of child abuse possible? What could possibly be worse than LYING to helpless children, using a position of authority to poison their minds with a bogus, illegal, State-sponsored religion? It was done to me. IT made me CRAZY!

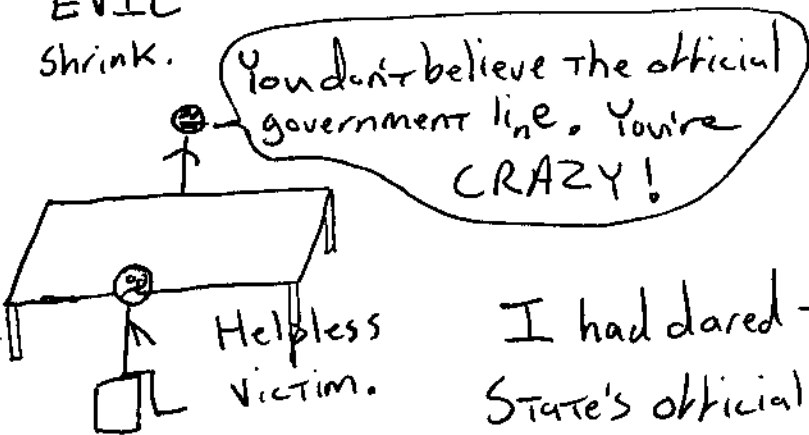

I was in the box for two months. It was the break I was waiting for! For four years, I'd been trying to contact a publisher. In the box, I got the address I needed! Despite her EVIL intent, Robert had sent me to the one place I needed to be!

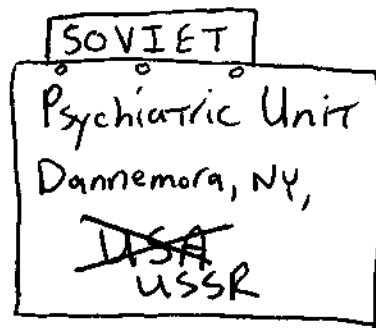

I even found out why I had been put in a strip cell. J. Waldron, OMH Unit Chief, told me that my letter "contained threats". I guess you have to be CRAZY to threaten to sue a government official.

EVIL  
Shrink.

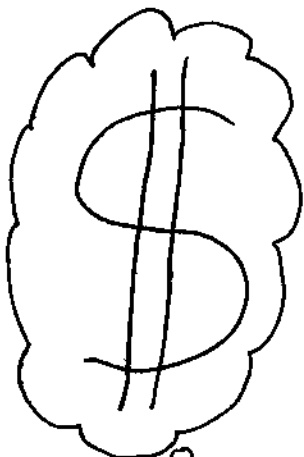

Helpless  
Victim.

I had dared to challenge New York State's official religion!

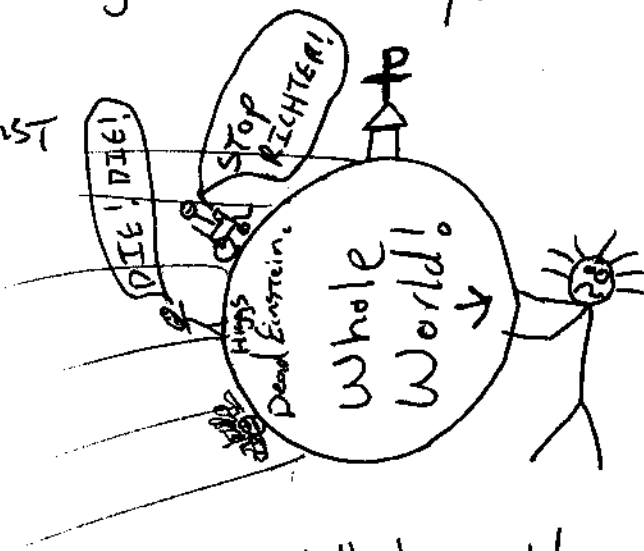

Billions of dollars were at stake! How would crackpot "physicists" get money to teach and "research" simple things? They get money to look, not to find. How dare I get in their way!

Crackpot  
dreaming.

It was me against the World. I was trying to expose the biggest fraud of ALL TIME!

Did I quit?

Whole world  
vs.  
me.

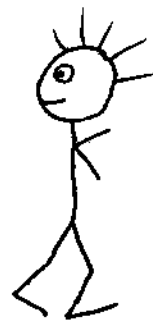

Of course not! I had made the biggest scientific breakthrough of ALL TIME!

Besides, I have SISU. Finnish blood runs through my veins, and FINNS DON'T QUIT! I wrote more than 100 more letters. Eventually, I got through to somebody. FINALLY!

Looking back over the last 4 1/2 years, I'm still amazed. All my life,

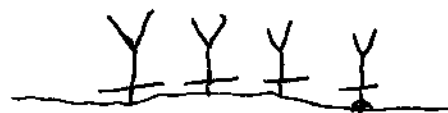

I thought that physics was a science. When I found out that mistakes had been made, I expected people to listen to the

Me, looking back.

truth. I thought that people wanted the truth. Didn't science magazines describe one expensive experiment after another? Jeremy Mock said that money was hard to get, so the ten million dollar "dark matter" detector was really special. Did he write back when I told him what and where it was?

NO.

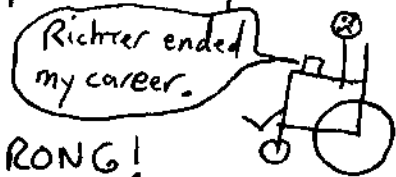

People, not listening.

dark matter ←

# The Enemy List

Everyone has enemies. Here are a few of mine.

# 1 (tie) Stephen Hawking. Useless. All my life, he has been held up as the world's leading physicist, but what has he ever done except confuse people? People don't understand his work, so they think he's really smart. He's smart, but he's WRONG!

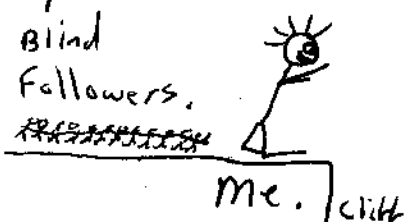

# 1 (tie) Peter Higgs. Fraud. I wrote to him about the error his work is based on, but he still claims to be a physicist. Give up, Peter, the truth is out! Maxwell was wrong, so all of your work is wrong. Have some decency, show some shame. Crawl away and die-somewhere, alone and disgraced. I shared the truth with you.

# 3 Einstein. Insane. He did some good work on Brownian motion and the photoelectric effect, then lost his mind. He based his "Thinking" on Maxwell, never thinking for himself. One of the pioneers of quantum theory, he refused to consider the implications of quantum uncertainty.

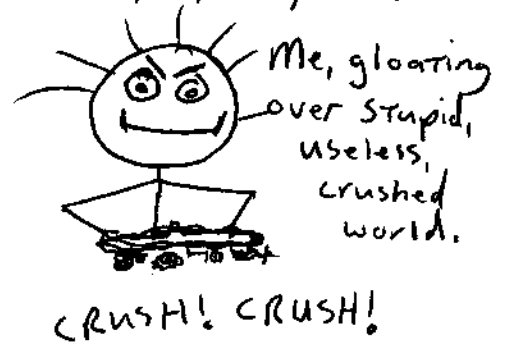

Crawling, crying.

# 4 The ignorant followers. All of the people who blindly follow whatever the "experts" say. This probably includes you. I'm an expert now: Follow ME!

IT was me against the world. Score: World, 0, Me,  $\infty$ !

Don't get me wrong! IT took me 30 years to win. All along, I knew that something was very wrong, but I never imagined that it was all wrong!

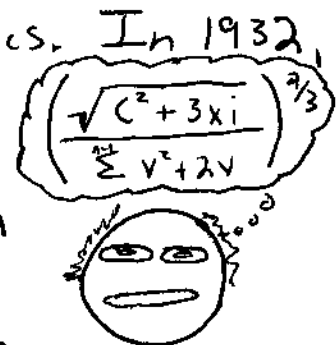

Let's look at some other classic battles:

Galileo vs. The Catholic Church. Name one person who opposed Galileo. No? I rest my case.

Hermann vs. von Neumann. This is one of the strongest proofs of the religious nature of physics. In 1932, von Neumann published a book that contained a silly error. The very next year, Grete Hermann, a woman, pointed out the flaw, but nobody believed that she could be right and the "great" von Neumann wrong.

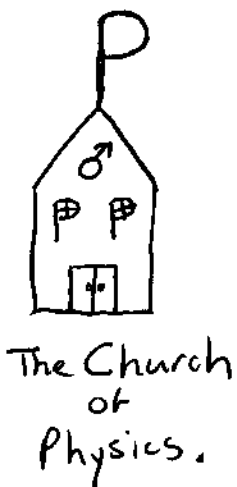

Idiot bowing down.

Von Neumann losing his mind.

That is Religion! Grete's credibility isn't an issue in science. Anyone could have read her proof, checked the facts, and reached the same conclusion. When John Bell, a "great" male, pointed out the error, in 1966, then people shifted their allegiance: To him, not the truth.

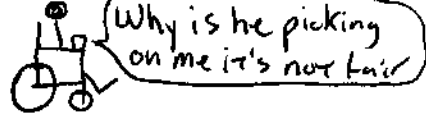

In science, there is no appeal to authority. Every fact, every conclusion, must be verified.

Newton  
 Von Neumann  
 Maxwell  
 Higgs  
 Einstein

Why is he picking on me it's not fair

Someone criticised me,

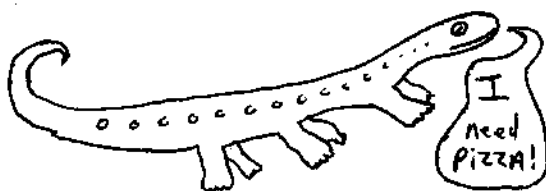

Told me it isn't right to pick on a cripple. What, I'm supposed to leave him alone? He's a monster, a maniac who betrayed the whole human race!

He's not stupid, he's reckless, ruining lives by making up pure nonsense. I'm not going to cut him any slack.

Besides, in case you haven't noticed, I'm a Sucky artist. How am I supposed

Four person

Deft, the six-legged typing Salamander, regrowing his legs.

To mock someone artistically it you

House

can't even recognise him?

I'm a physicist, not an artist! Anyone can learn

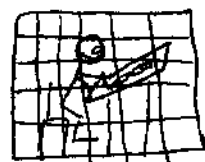

Me, STILL in prison, Thinking about physics.

how to draw, but only one person ever learned how to discover a Universe.

I learned how to write, developed a fantastic sense of humor, and

**CRUSHED** the whole physics

community. Was I supposed to learn to draw, too?

He learned to draw in prison.

How was I supposed to know that I'd have to publish my work in comic book form? Every other scientist I try to draw looks the same. If people had paid attention to my words I wouldn't need this Sucky art.

# Special Extra!!

## The Book of Bad Logic

A ball just sits there.

It we push it, it moves.

Because of friction, it slows down and stops.

Newton realised that without friction, things would keep moving.

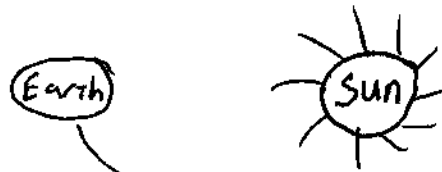

He then made a terrible mistake. If force causes acceleration, does that mean the opposite?

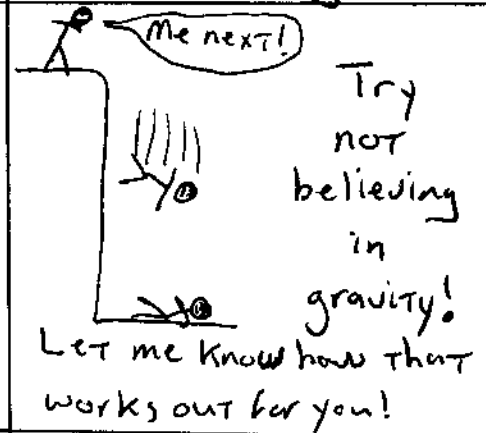

Lightning causes fires, does fire require lightning?

If A then B.  
If B, then A?

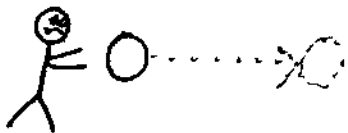

You can't use logic backwards!

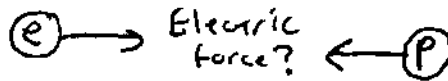

The Earth acts as if something is pulling on it.

Try not believing in gravity!  
Let me know how that works out for you!

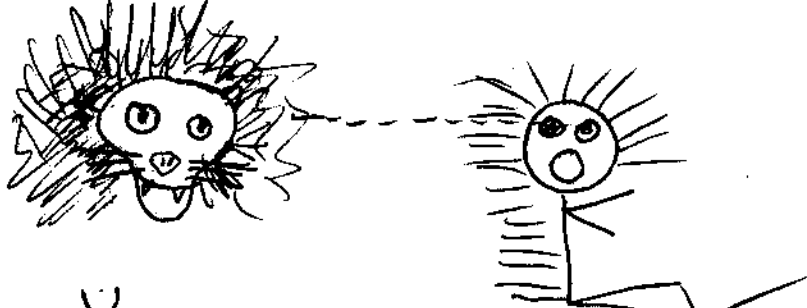

On a human level, it seems to make sense. Things don't just move.

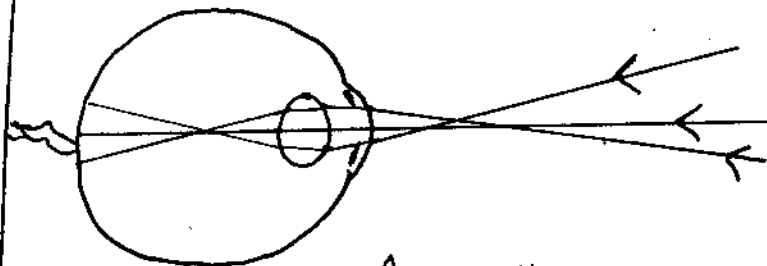

This led people to look for "forces". Then they needed "fields" and "gauge bosons". IT was all nonsense!

Fields, forces, gauge bosons, gluons, Higgs...

IT'S ALL WRONG!

Your ancestor saw a hungry lion. He ran!

Eyeball Actually, some photons (light) hit the back of his eyeball, forming a certain pattern on the retina.

No! Actually, the cells in

the visual cortex, at the back of the brain, activated in a certain pattern. That is what the rest of the brain "sees". Well, even that isn't quite it!

Sleeping ancestor

Maybe he was just dreaming!

This is probably a great example of why I don't do much drawing! And a result!

Full lion.

Hm, two circular patterns with a lower than average density of photons...

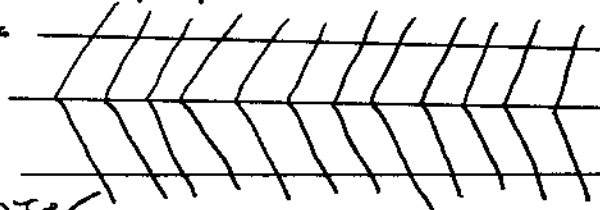

Our ancestors didn't have time to consciously analyze each and every little bit of information, or the ability to.

DANGER!

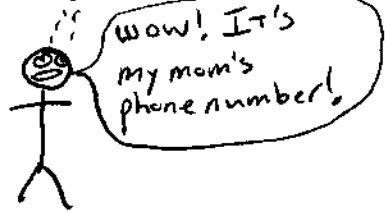

Instead, the brain, without our being aware of it, processes huge amounts of information. This is why optical illusions work.

How the Mind Works by Stephen Pinker

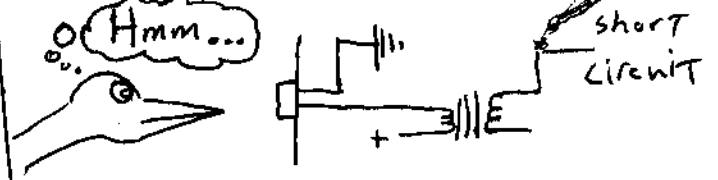

Read This Book!

39724101368  
24779982376  
90135287333

wow! It's my mom's phone number!

We see patterns and meaning in all sorts of random things.

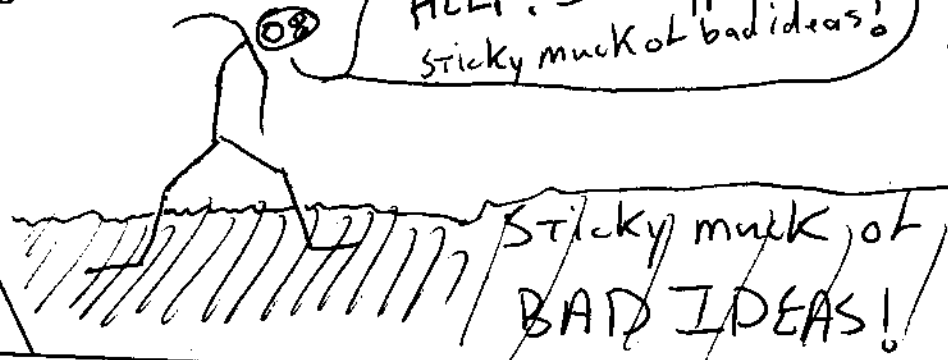

Even birds are superstitious! B.F. Skinner discovered this by accident when one of his "Skinner boxes" malfunctioned. Look it up!

Brain lifting weights.

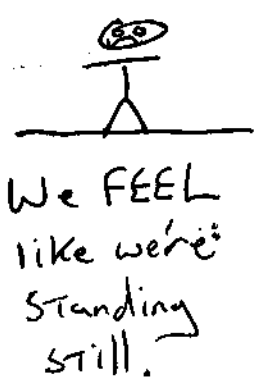

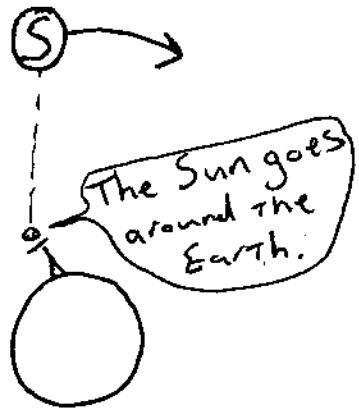

It takes a HUGE mental effort to separate facts from ideas.

Once we learn to believe in something, or to see things a certain way, we're stuck.

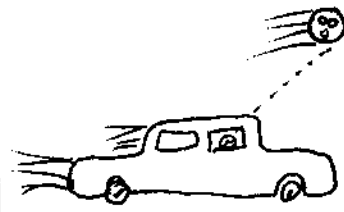

It's even WORSE than that! The problem is that we don't even see the PROBLEM.

We FEEL like we're standing still.

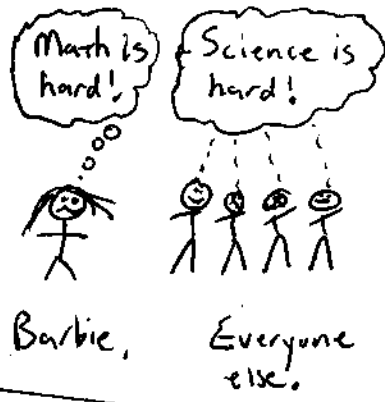

So we see the Sun "move".

Zooming Moon illusion.

Our human senses don't always give us an accurate idea of what's going on.

**We Believe!**  
 A thousand years ago, people believed some CRAZY things.

**THOSE** guys were sooooo STUPID!  
 In 1800, they knew better.

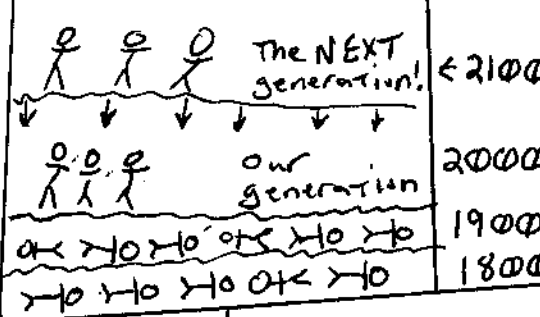

**THOSE** guys were sooooo STUPID!  
 In 1900, they knew better.

All those guys. In 2000 we know better! Each generation thinks that they finally got it right. Nobody ever thinks about one thing:

**NO!**

Why are people so damn arrogant?

Don't they see that each and every single generation is completely **WRONG** about all kinds of things?

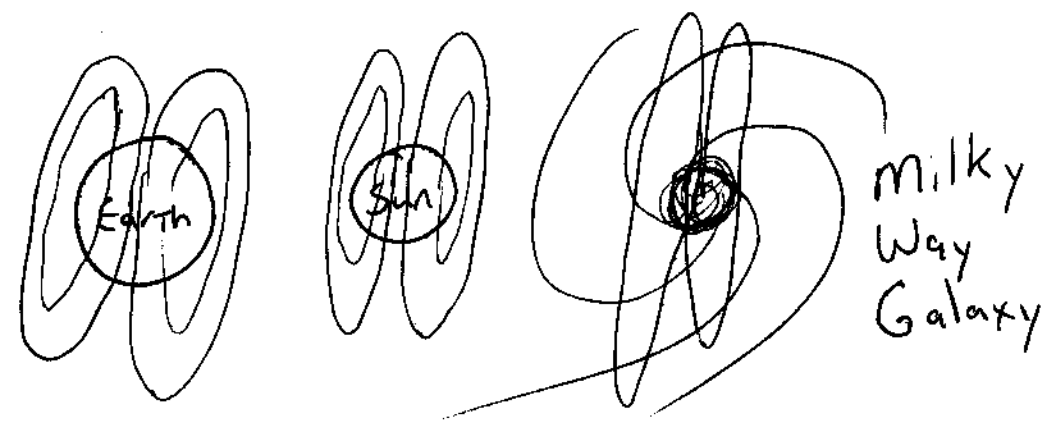

The real problem has always been that people mix up what they know with what they "know".

We see one or two facts and jump to conclusions.

When we get a new fact, do we look back and check our assumptions?

~~+~~ ~~-~~  
 Nope! We already "know" about magnetic fields,

Milky Way Galaxy

so we see them Everywhere!  
 Once we "know" that "a thing" exists, we never think about it.

The same thing went on with Black Holes.

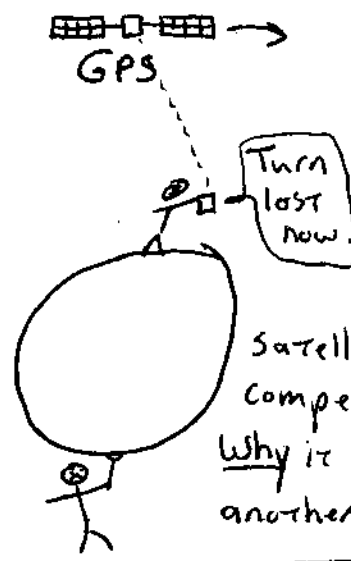

They don't exist, yet people "see" them all over the place. How is this possible?

← Jets → X-rays → Swirling stuff  
People see things, but they never see black holes. There's something there, but it's a...

• Collapsar  
••• Collapsar, a collapsed star.

• Collapsar • Black hole  
What's the difference?  
A collapsar is verry verry dark, but it's not black.

↑ ⊕ TIK TIK  
In space  
Clocks run slower in lower places.  
TIK TIK

We know that this is true because we see it every day. GPS satellites have to compensate for it. Why it happens is another story!

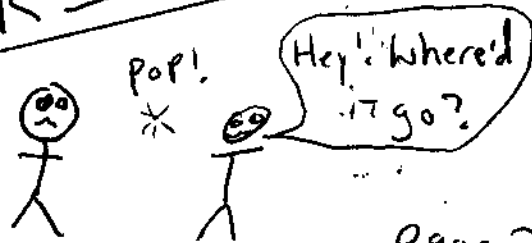

•  $E=mc^2$  •  $E=mc^2/R$   
Both CQG (Quantum gravity, the truth) and Einstein's specious general relativity agree on one thing:

A black hole can never form! As "time" slows down, it takes longer and longer for anything to happen. You can't reach infinity.

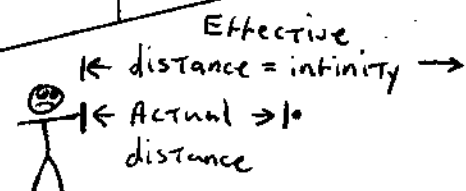

•   
But black holes are such a cool idea! Too bad real physics isn't about being cool. It's about being **RIGHT**.

  
When physicists first tried to calculate what would happen when a massive star collapsed, they got a weird result.  
Space and Time... and  
↓ To ↓ infinity!

••• would be **INFINITELY** distorted. A black hole would...

••• pinch off from the Universe and disappear! IT might even form a new Universe?

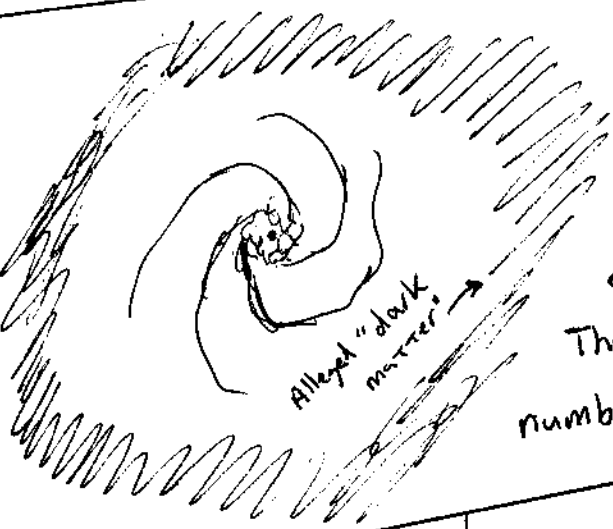

Or, it would be infinitely far away, and therefore affect nothing!

Here's a Big problem: We see visible stars orbiting invisible things.

• ☀ •  
| x | ∞ |  
? ?

You can't have it both ways. If time slows down, it takes forever for a black hole to form. If space stretches out, then a black hole would be infinitely far away. What did the BELIEVERS do? They played "Let's pretend"! They pretended that the distance didn't change.

Now the fun STARTS! Galaxies don't rotate the way they are "supposed to". Observations don't match predictions. Did astro physicists admit that their theories about how gravity works were wrong? NO! They just invented "dark matter" to make the numbers fit. Nobody has ever seen dark matter.

• Collapsar, made of dark matter

Jeremy can watch his "Dark Matter Detector" until the Sun goes out.

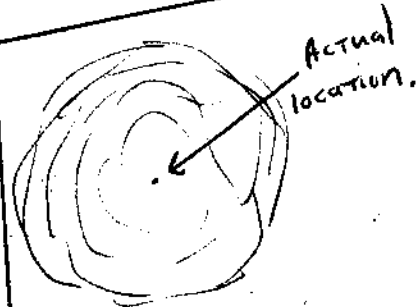

O'Meara didn't listen either. He won a Nobel for mapping "clouds of dark matter", but he was...

Collapsar. The deeper, the further away.

... actually mapping the distribution of matter inside ancient, super-massive

Collapsars.

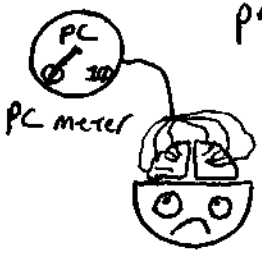

Acts like this, in terms of gravitational effects.

Because of the "extra distance", a collapsar acts as if it is turned inside out.

Me, hoping.

Well, I hope you learned something, but I'm not holding my breath. I tried to be entertaining, after all, who wants to read a boring physics book full of equations? You have probably realised that I am 0% politically correct. Too bad! I'm all about the truth. I believe what is

me, being metered.

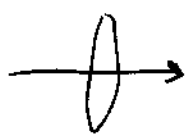

real. If you don't, that's your problem. Don't page 30 RJ Richter make it mine.

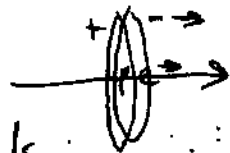

Me, not holding my breath.

# Brain-Purging Section

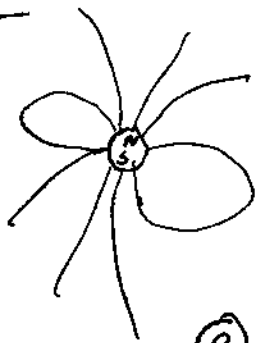

Clean your brain! Eliminate these bad thoughts:

Magnetic fields. Stop picturing them!

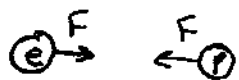

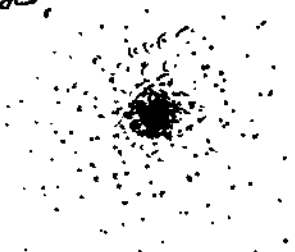

Picture an overlap of positive and negative fields.

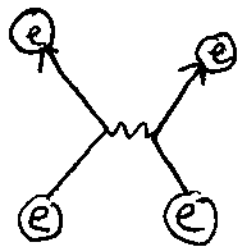

Fields

Stop picturing them! There are only particles and the chance of finding them. Think of particles as blurry clouds that fade with distance but don't have edges.

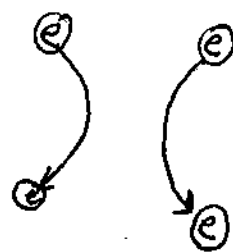

Forces. There is only energy. Nothing is pushing or pulling. Accelerating particles and objects follow constant-energy paths.

$$E=mc^2/\lambda$$

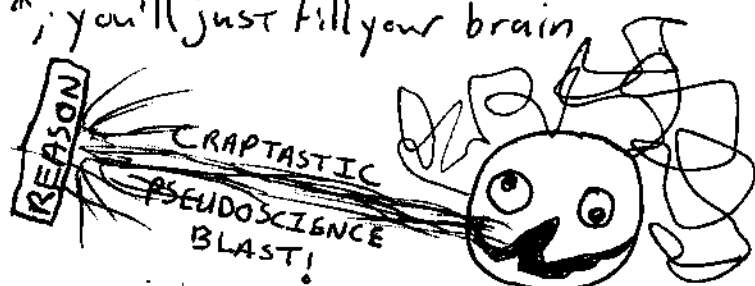

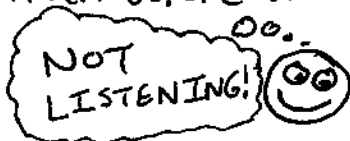

Gauge bosons. Although we can imagine, and thus say, that objects and particles move as if they were emitting or absorbing "gauge bosons", it's just imagination.

$$E=mc^2/\lambda + E_k$$

**PHYSICS!** Newton was wrong. Maxwell was wrong. Einstein was wrong. Hawking, Penrose, Higgs: All wrong. Feynman, wrong. It's all wrong. Don't waste your time reading any "physics" book written before 2015\*, you'll just fill your brain with CRAP.

\* Unless it's the book I emailed to Alizon in 2014. What did she do with it?

# Big Thank - You's

Who you think tells people who you are. I'm not going to go into metaphysical or religious thanks, "Thank you God.", that's between me and Him. I KNOW that there was no "Big Bang", that the Universe(s) didn't expand. If you think about it, you will too.

Big thanks to Kefau. One of my readers accused me of being in love with her. Oh please! I don't even know her! I like her singing, and she inspired me to think about something I had always taken for granted. I'm not some kind of obsessed, creepy stalker!

Big thanks to Sennarine Persad. When it was me against the world, he kept me laughing,

Creepy creep.

Bush

Destroy Richter!

GRRRR!

The Flip.

I got your back!

even when he was trying to poison me with his weird Trinidadian cooking.

POTATO x snail = Eddoes.  
Powder potatoes + snot = Eddoes.

Big thanks to Julian Barbour, the only physicist on Earth who bothered to write back. He even sent me his book "The End of Time". When I went through it with a red pen, all of the mistakes were things he got from other people. When he thought about things, he did OK. Keep thinking, Julian. Once you stop believing in magnetic fields, the rest is easy.

# Nullitzer Nominations (Dummnations?)

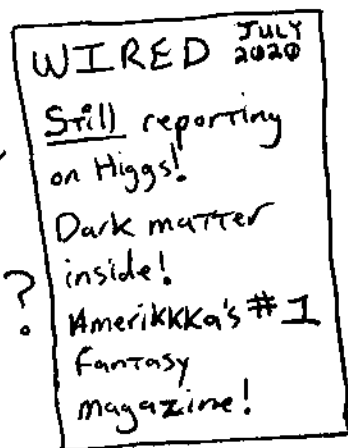

I'd like to nominate the following USELESS "journalists" for the Nullitzer Prize for Nonexistent Reporting:

Robert Parks and everyone else at the Press-Republican newspaper in Plattsburgh. I wrote to your paper repeatedly, to reporters, editors, and you personally. Did you send a reporter to see me? Did anyone even bother to write back? No and no. Don't bother now!

Mark Robinson, Steven Levy, and everyone else I wrote to at WIRED. Mark actually wrote me back, told me that my work wasn't the kind of thing WIRED would publish. Don't be a hypocrite, Mark, don't publish it now! Noah - this means you too!

Nature, The Wichita Eagle, The New York Times, Wall Street Journal, Buffalo News... Isn't there one reporter left who knows how to report?

Oren Yaniv, who emailed me back when I was in the Feds, then dropped the ball. How ya' doin', Oren? You suggested I contact someone else. Now you contact someone else! Instead of you interviewing me, how 'bout I send someone to interview you about being a failure?

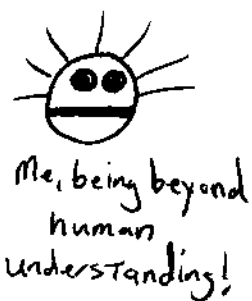

Who else? Radio and TV reporters, agents, editors, publishers, magazines (Nat Geo, Discover, Popsic + PopMech, American Scientist, Analog...), Too many to mention.

Page 33 RJ Richter You all BLEW IT!

# The Future (if any)

So, what am I working on now? Stuff you wouldn't believe! I'm the world's #1 expert on neutrinos (everyone else thinks that they are neutral particles in this Universe!), so I'm working on communications and weapons applications. The FBI sent someone here to interview me about this, but they sent a moron. When I asked him to put me

in touch with someone who could understand what I was talking about, what did he say? ↓

Stop right there, you lost me already.

I don't understand any of this.

I have no idea what you are talking about.

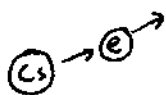

That's not going to happen.

Well, he was right about that part, at least.

↑  
His actual words.

Nuclear reactors contain Xenon, which absorbs neutrons.

Over time, the Xenon breaks down. This takes several hours.

Once someone understands what and where neutrinos really are,

he can use them to destabilise or even destroy nuclear reactors.

**GAME OVER!**

Richter  
СМАНУНА!

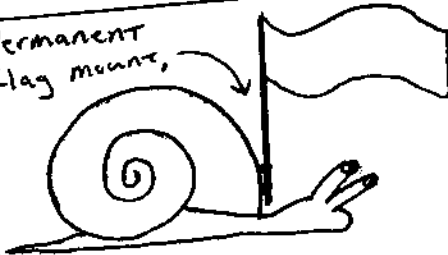

But don't worry! Once I realised that the so-called authorities had dropped the ball...

... I wrote to the Russians. They know how to doubt Western "science"!

Page 34

Permanent flag mount,

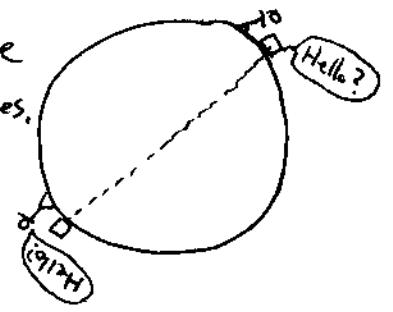

France should be Surrendering (again) any day now.

RJ Richter

What's the difference between a Russian Tank and a French Tank? The Russian tank leaves the factory flying a RED flag. The French tank, a white flag! Hahaha.

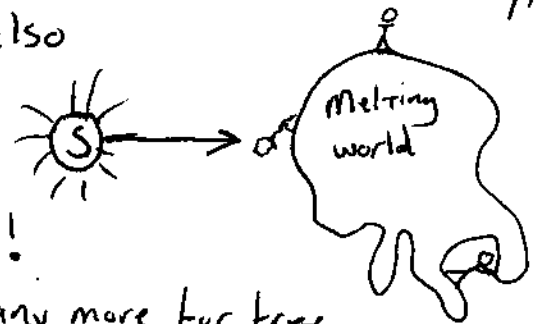

Neutrino communications are right around the corner. It's easy enough to make neutrinos, but detecting them is another story. It's impossible to work on this at all unless you use the Jussiverse rules to understand neutrinos' real properties. They don't make sense in our Universe because they aren't in it. Manipulate their real properties...

Working on something else entirely, I figured out a way to add about 3mpg to certain kinds of cars at minimal cost. I also have two new A/C systems, both better than what we use now. Toyota, call me! I've sketched out an 8x8 1000 hp super-hybrid that should get 30-35 mpg or better, using all four of my efficiency-boosting ideas. 95% OTS!

Since global warming is inevitable, and is going to be much worse much sooner than anyone expects, I've been working on Solar A/C. Low efficiency, but cheap materials and only one pump. I'm also working on some new wind power ideas.

Pie-in-the-sky! Quantum coupling to turn heat into electricity? It's impossible!

Well, maybe not. I'm not going to shave any more for trees.

How about a CURE FOR CANCER!? Duh, read the NatGeo article about long life. Laron dwarfism? Don't block the IGF, that's long term. Right now, inject it! Stimulate the cancer cells to divide faster, then zap them with chemo or radiation. I know chemo is sooo old-school, but it's what we have right now. We can worry about blocking IGF in the future. Save Lives Now!

How about a more efficient way to cool CPU's, especially in server farms? Improved efficiency in reverse-osmosis plants, and lower maintenance costs? Tech #1, 40% improvement. Tech #2 is better, maybe twice as good as today's systems. Dubai, anyone? Call me!

# Aliens

OH NO!

Suckiest form of space travel EVER!

The BOX!

OHH YES!

Probex, the Suckiest Alien EVER!

People ask me all the time if I believe in Aliens, being that I'm a scientist and all. Of course I do! The Universe is **VAST** and **old**, so they are certainly out there. They **HATE** us. Why? Why not? I imagine

a planet where Hitler won, it's got to happen somewhere! Look what he did to people, what

Planet-destroying super-dickhead Alien.

would he do to Aliens? It There is even one planet of

planet-destroying super-dickhead aliens anywhere, that's

it for everyone else. What about us? Suppose some more-or-

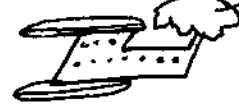

less-okay aliens saw our TV. They'd wipe us out just in case!

Captain! We've got a flat!

Aliens.

Suppose there is some sort of alien federation, where everyone

looks like humans in makeup? Why would they want to talk to Earth? What could they possibly talk about, magnetic fields, Higgs bosons, unicorns? Do we talk to ants or lizards?

Starjack

Nope, there's only one thing they could want:

**FUN!** Alien teenagers borrowed their parents' "cars", came to Earth, and

stuck things where they don't belong. Give a human

kid a magnifying glass and see what happens.

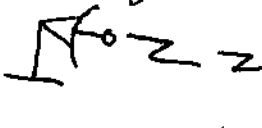

Once the Aliens invented "Starjack", the probing stopped. Mostly. Or Maybe...

# I AM AN ALIEN!

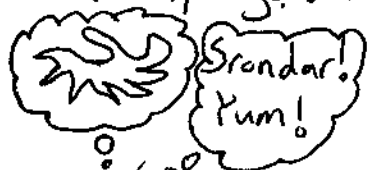

That's right, I'm not even from Earth!

Sure, my body was born here, but my mother was an Alien! (TRUE!)

My alien intelligence was beamed into my developing brain. It wasn't exactly a good fit. I was always the weird kid. How was I

Supposed to act "normal" when I was thinking about eating a Srondar, alive, then eating it again?

Me, thinking REALLY Strange thoughts!

So, we're like, going to the lake, like swimming, like...

...like, dude, why are you looking at me like that?   
 clueless human.

You see, I was sent here to monitor you, search out and make contact with your scientists, but

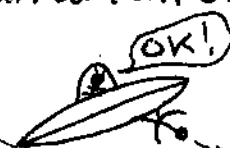

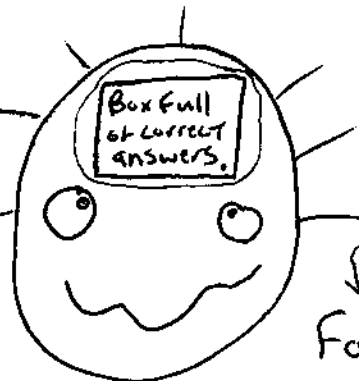

YOU DIDN'T HAVE ANY!!

I couldn't find a single rational being on the entire planet. The only honest "scientists" were your science fiction writers. They were crazy, but in an honest way: At least they admitted they were making stuff up!

Think about it! How else could I know the answer to EVERY big question? I don't have a brain, I have a box

stuffed full of correct answers! I get periodic updates from the MotherShip.

I know everything my people have learned over billions of years!

Four years ago, I got sick of waiting.

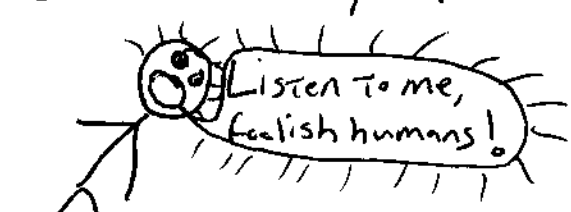

I decided to violate my orders,

Me, updated.

just TELL you foolish humans the truth. What did you do?

Did you listen? NO! How is this possible? How can I speak simple facts and logic, yet be ignored?

Foolish humans, NOT Listening!

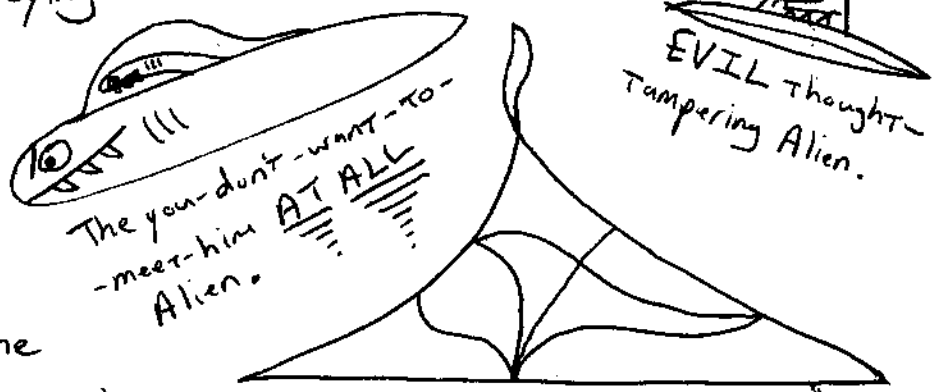

Me, Violating orders.

Aliens!

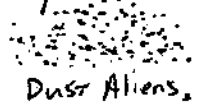

That's right, **MORE ALIENS!** We've got the basic planet-destroying super-dickhead Aliens.

We've got so many kinds that even I can't keep them all straight! Forget all the rest, the ones you REALLY need to worry about are in the top right corner.

The utterly incomprehensible nobody-even-knows-what-they're-doing-in-there Alien. And we don't want to know, either!

THEY are the reason why humans can't think straight! They have built giant thought-tampering towers **RIGHT IN PLAIN SIGHT!** Their radiations cover the whole planet, but if you go inside it's the end! You might even meet Cruise or Travolta! Oh! Wait a second!

Me, brain frying!

Sorry, my anger detector was going off. It seems that I pissed off some Scientologists. Wahh Wahh Wahh, kiss my big black ass! Stop crying! It's bad enough that I have to share this planet with you, listening to you cry is just too much. It's frying my brain! **SHUT UP!** Get up out my RANKS!

Right, back to business. So, I gave you guys four years to stop being crazy, stupid, or both. I can't take it anymore!

If I can't find a single rational being on this planet by the end of the year, **IT'S OVER!**

Think about what happened to the dinosaurs! We got tired of watching velociraptors chew on everything, so we cleaned the slate! Get your act together, or you're next!

Comet Shower.

OK! Relax! I'm just kidding! Or am I?

WHEW!!

My biggest fun, laughing so hard he cried.

Okay, let's all just stop and take a deep breath. Aaahh, better now? So, I got a little bit wound up there at the end. It's just that physics is sooo serious and boring. I had to put in a tiny amount of humor, just to keep people interested. I actually wrote a nothing-but-humor comic once, but the first guy who read it died, so I ration it out now.

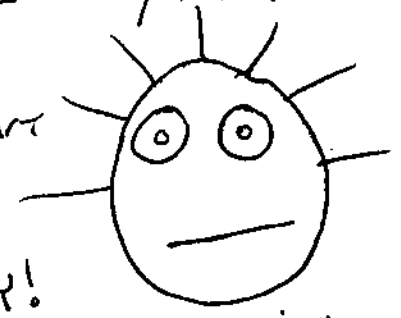

Any commie pinko faggot mentheads who feel offended can just GO TO HELL! Why did you read my book anyway? Huh? Oh yeah, one more thing! Why are you still reading it, page 39! Admit it, you like it, or you wouldn't have gotten this far! Go watch some Roseanne reruns and chew on a dead gerbil!! AAARRGH!

As for those of you who like this kind of stuff, there's lots more! I'm the world's first Action Rockstar Scientist! Not only did I CRUSH the whole physics community, I turned my dry, boring scientific achievement into the most out-of-control science comic book EVER. You aint seen nuthin yet.

How do I do it? I am, of course, naturally wonderful. Furthermore, to survive over 20 years in prison, I had to learn how to make people laugh, so I could stab them right in the neck! Some of my jokes are so funny that I can get three or four hits in!

One last thing: I'd better start getting some mail, or I'm going to do something terrible. I will STOP BEING FUNNY!

Hahaha! It's even funny when he stabs me!

Me, not being funny.

## HELP WANTED

**NOW HIRING!** We need experienced 20<sup>th</sup> century physicists to sweep, mop, and dust. Must have at least a pseudo-doctorate, (806) 256-4859, or broken@phsics.com

**\$7.00 per hour!**  
Call now if you still believe in magnetic fields! We hire only crazy and stupid people! Hearing voices OK! (800) 555-1234

**Burger Flippers needed.** Toilet-cleaning experience a big plus. Great benefits. Check our website for full details. **NO EX-PHYSICISTS!** www.bfntcea.org

## Dinosaur Wrangler:

Must be big and tough enough to hold down an angry dinosaur. Beard optional. If you can get the job done, email me today! ketha@ketha.com

## Pets for Sale

**Broken string theorist.** Cries, moans, drools occasionally. Good eater, maybe too good. No longer housebroken, now just broken. Call for details. 333-3330

**Magnetic dog.** Actually two dogs, one moves, one doesn't. Need to get rid of it/them before my wife finds out. pbjtime@pr.prr

## Books for Sale

Large collection of pre-2015 "physics" books. Makes great mulch, or burn them in your woodstove! Free delivery! No picking and choosing. \$10.00 peter.higgs@crazy.phy

## COLLECTABLES

**BLOWOUT SALE** of Richter memorabilia! Get it before it's gone! Don't miss this once-in-a-lifetime opportunity to obtain priceless artefacts!

- Broken coffee cup. Richter actually drank coffee from this cup while discovering the Jussiverse! Heavily stained with authentic coffee stains! Cracked in two places! \$2K.
  - Broken calculator. TI-30X Solar. Worn out by Richter himself! \$25K.
  - Black plastic fork. This is the fork Richter used to eat his famous "peanut butter crackhead soup"! Also available: The pot he cooked in! \$1K/\$4K.
  - Manuscripts! The most complete set of Richter manuscripts in existence! Includes the paper that proved Einstein wrong and the very first written page regarding the Jussiverse! Hold History in your hands! \$10M, complete set.
  - Many other items available: Old towels, plastic bowls, books, grievances, everything Richter owns! Act now while he still needs money! First check gets it!
- Contact Richter Himself for more info, or send payment to:
